**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Susan Mack on May 29, 2007.

The application has been amended as follows:

Claim 1, line 9, after "fluoride-scavenger" insert -and in the presence of a reaction solvent-.

Claim 6, line 1, delete "5" and insert -3-.

**REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the prior art of record does not anticipate or render obvious the claimed process for the preparation of a cis-4-fluoro-L-proline derivative of Formula (II). The closest prior art processes are disclosed in Demange et al. and U.S. Patent 6,384,234. The process disclosed by Demange et al. uses a different reagent diethylaminosulfur trifluoride (DAST) instead of N,N-diethyl-N-(1,1,2,3,3,3-hexafluoropropyl)amine and does not use a hydrogen fluoride scavenger. The process disclosed in Example 11 of U.S. Patent 6,384,234 reacts a cis-4-hydroxyproline derivative instead of a trans-4-hydroxyproline derivative with N,N-diethyl-N-(1,1,2,3,3,3-hexafluoropropyl)amine and obtains a brown oil which is not identified. The brown oil is reacted further to produce trans-4-fluoro-D-proline. This process also differs in that it is not carried out in the presence of a hydrogen fluoride scavenger. The references provide no motivation to modify the processes disclosed therin to arrive at the claimed process. WO 2006/103986 discloses a similar process for the preparation of fluoroproline derivatives but the reaction is not carried out in the presence of a hydrogen fluoride scavenger. This reference was published after the filing date of the instant application.
